Alphonso X, King of Leon and Castille believed that board games were for those "who like to enjoy themselves in private to avoid the annoyance and unpleasantness of public places...and in general [for] all those who are looking for a pleasant pastime which will bring them comfort and dispell their boredom" (from the Introduction of Alphonso X's Book of Games @1282AD).

RESEARCH OF THE ITEM IN ITS PERIOD:

HISTORY

"Gluckshaus is Old High German for "House of Fortune" and is a gambling game with dice played during Renaissance throughout Europe." (Dagonell the Juggler)

ITEM IN PERIOD

Gluckshaus board Dated 1583 Bauerischen National Museum, Munich

Requirements of Play:

- ♣ A board
- ✤ A set of six-sided dice.
- Coin (Money)

The Board

Research:	My conclusion:
Partlett states that it is mostly played on an "ad hoc chalk-drawn board," (Partlett, 31-32).	Gaming surfaces were made out of what was convenient and enjoyable for those who intended to play. One
Tomas Nowak states that the best playing surface is "a solid, painted wooden board, but boards made of leather and linen are recorded."	may have a board of wood at home, but a soldier may draw one of chalk on the ground to play.
"These wooden boards were expensive and elaborately carved and painted works of art. (Dagonell the Juggler)	

Layout of the Board:

"It has eleven compartments 2 to 12. A similar board of	My conclusion:
1583 has ten compartments in the spaces formed from a	10 spaces form a double cross
double cross, and these have background decorations	
reminiscent of playing cards" (Partlett, 31-32).	
"The fields are in the form of a house with 11 (or 10) rooms or windows arranged" (Nowak)	
"Each square of the board contained a scene, and the rest of	
the board surrounding the squares was heavily	
illuminated." (Dagonell the Juggler)	

The Dice

All sources indicate a set of six sided dice.	My conclusion:
	Set of six sided dice.

Coin (Money)

This game was a fast paced gambling activity. The money	Any coins or markers for gambling.
of the day would have been used for gambling.	

Rules of play:

itules of pluy.	
According to Parlett, each player "in turn throws the dice.	My conclusion of the rules:
If the [space] is empty, the caster places a stake on it;, if	
not, he wins the stake already there, leaving it empty again.	Take turns rolling the dice.
[I rolling 7, all stakes are left to accumulate. Throwing	
double 1 entitles a player to sweep all the stakes except	If 3,5,6,8,9,10, 11 are rolled, take a
compartment 7, while a double 6 sweeps the board entirely.	coin from the space of this number; if
[On a ten space board], as there is no 4, a player throwing it	empty, leave a coin.
simply does nothing" (Partlett 31-32).	If 4 is rolled, nothing happens but a
	loss of turn.
"Players roll, add total of dice, and thus on a field of the	If 7 is rolled, leave a coin at the

when only one player is left with the coins. A variant with	
10 boxes to play, it the 4 roll means nothing." (Nowak)	

CONSTRUCTION OF THE GAME

Board	
What was is it made out of? Where did those materials	What materials did I use?
come from? "maple, alder, and ash were common, with yew, and boxwood and even Scots Pine on occasion" (Morris as quoted in Rettie, p.3).	A basswood board with a beveled edged pre-cut was purchased for the project.
According to Martha Schreffner's research, "artwork on wooden panels was widespread across Europe and wood used included poplar, oak, pine, silver fur, linden, beech and chestnut."	
"First take a little boxwood panela little panel of old fig is good" (Cennini, chapter 5 and 6)	
"The best is a solid, painted wooden board" (Nowak)	
How was it made in period? "wooden boardselaborately carved and/or painted works Each square of the board contained a scene,heavily illuminated." (Dagonell the Juggler)	What method did I use? The design was pyrographically inscribed.
The period example from the Bavarian National Museum in Munich was pyrographically inscribed.	Where did the pattern come from? The design imitates the drawing from the 1583 board. The "cartoon", which
How was the pattern transferred to the board? A technique of transferring a design on paper to wood, canvas, plaster and cloth was called "pouncing". The artist would create a sketch on paper, called a "cartoon", which would then be laid upon the surface to be worked. Holes were punched through the paper with a needle and then patted with charcoal dust, leaving a series of dots on the surface showing the outline. These techniques would have been available to the period pyrographer.	is a reproduction of the 1583 board from the Bayerischen National Museum was rendered from Laura Palmer's coloring book, <u>The Big Book of Board Games</u> . The design was transferred to the board with the previously described period method of pouncing.
What tools were used to pyrographically inscribe in period?	
According to Martha Schreffner's research, "It is not known exactly what implement(s) were used to perform pyrography pre-1600. One hypothesis is the use of heated needles Relief burning tools are described in the Dictionary of Woodworking Tools, c. 1700-1970 as "metal rods known as 'points' with flat, claw- or horn- shaped ends, fitted to cork-covered handles to protect the hands. The points were heated in flame and then applied to the wood surface."	What tools did you use? A modern implement was used to reproduce the look and feel of a period piece without the dangers of period methods. This supposition was based on Schreffner's opinion after extensive experimentation "The electric

 soldering-irons, set into wooden or other non- conducting handles" (Fosdick, 496). Description of soldering tools by Theophilus in 1125: "Now you should have a soldering iron which is long and thin, with a slender point, filed and tinned. Put this into the fire." What technique was used to pygraphically inscribe in period? "Tools cooled rapidly, and had to be constantly shifted, while the oxidation of the copper necessitated constant cleaning. What with feeding his fire and blowing it up with hand bellows, it is a wonder that the wood-burner we deced worthing ertistic" (Feedicle 400) 	stylus is subject to heat dissipation when the tip is drawn across the wood so, like the period pyrographer, development of the appropriate techniques of pressure, temperature, and drawing speed are required to achieve a range of effects. The electric stylus can reproduce the look and feel of a period piece if the artist studies examples from period and chooses metal tips to achieve the same effects.

Dice

"Modern dice have the six opposite the one, the three	Dice for this rendering are randomly
opposite the four and the five opposite the two. Some	faced.
medieval dice also had this pattern but many were	
apparently random in the pattern of the faces." (Gothic	
Green Oak).	
"square shapes of six equal sides, all equal in size and	
shape because otherwise they will not roll" (Alphonso	
X	

Coins

The coin would have been the money of the day in period.	For the purposes of play by children,
	wooden chips in a style of coins from
	the period have been created to
	accompany this board.

CONCLUSIONS:

What inspired you to make this item?

At a previous event, the children were playing period games. My daughter was unfamiliar with the games and the rules. Some of the rules were rather complex. I wanted to make a game that was fun, fast-paced, with simple rules for her and myself to enjoy.

What did you learn from making this item?

I learned quite a bit about pyrography. It was an art form used to decorate everyday items, and therefore, not many examples of it exist. There are artists who are attempting to define what the period methods of pyrography were through experimentation and discovery. Any research in this area will add to the body of knowledge, and therefore, is worthy of study.

If you were to repeat this project what would you do differently?

Change the design of the board or perhaps make a board on leather, so that it may be rolled for ease of transporting. I may also venture at some point into experimentation in making period tools for this process.

Annotated Bibliography

Murray, HJR. (2002 reprint). History of Board Games Other Than Chess. Oxford University Press

"...This book provides as complete a record as possible of the other board games that have existed in different parts of the world, showing how they were played, what is known of their history and developmentand their ultimate origin. In the fifty years since it was written it has become the classic compilation of evidence from ancient sources and from archaeological finds and anthropological records. The main game types are introduced and discussed at length with numerous examples being added in a more notational form. While recent archaeological finds modify some of the older evidence presented here, the main themes remain unaltered and this book remains the primary reference work for modern historians." From Powells of Chicago.
